

At first I Logged up on '<http://automationpractice.com/index.php>'

Then I changed the data as described:

cypress/e2e/tests/login.test.ts at line 12 on my email and password

and

cypress/fixtures/user.json line 3 emailId changed on my email and line 4 password changed on my password.

I made changes as described below:

Open node\_modules\cypress\lib\tasks\verify.js, search for

VERIFY\_TEST\_RUNNER\_TIMEOUT\_MS and change it from 30000 (default) to 100000.

I made changes:

cypress/e2e/tests/login.test.ts

at line 35 `loginPage.validateLoginError('Invalid email addresssssss.')`  
to `loginPage.validateLoginError('Invalid email address.')`

At cypress/e2e/tests/myAccount.test.ts I uncommented line 6 and commented out line 5.

And I don't think this is a test. Because it described like (My Account Functionality), but just he follows the link and writes the result to the console.

I renamed main > master on my Github
